i-MSCP Requirements

General

- 1 GHz or faster 32-bit (x86) or 64-bit (x64) processor
- 512 MO memory (minimum) - For heavily loaded servers or high flow is recommended at least 8 GiB
- 1 GB of available hard disk space (only for i-MSCP and services managed by the same)
- Internet access (100 Mbits/s recommended)
- A file system that supports extended attributes such as ext2, ext3, ext4 and reiserfs* file system.

Necessary for the partition on which you are storing the Web directories.

* In case of reiserfs, you must ensure that your file system is mounted with the **attrs** option. See Using reiserfs file system with i-MSCP for more information.

Distribution

- Debian >= Wheezy (Base system with standard packages installed)
- Ubuntu >= Precise Pangolin (Base system with standard packages installed)

Software Version

- PHP >= 5.3.2
- Perl >= 5.14.2
