

Howto enable DEBUG mode

I. Enable debug mode permanently

Simply edit both the `/etc/imscp/imscp.conf` and the `/etc/imscp/imscp.old.conf` files and set the **DEBUG** parameter value to **1**.

II. Enable debug mode only for setup/update process

For versions already released:

Follow the procedure above and revert it back after.

For master branch:

Just run the script with the debug command line option. (type `perl <scriptname> -?`) for more information about available command line options.
