

Configure i-mscp to navigate behind a proxy

When connecting to the outside there's one can use proxy server to avoid part of the risk of being infected by using a list of trusted sites where you are connecting. On a server that has to be configured in several places, here are the places where you will have to configure the navigation proxy in order for it to work.

Apt-get

If you are on debian, you will have to configure the server to download its updates via proxy, you have to edit the file `/etc/apt/apt.conf.d/proxy-guess` and set it to:

```
Acquire::http::Proxy "http://user:password@proxy.example.com:3128/";
```

Curl

The perl engine of i-mscp installer relies on curl to download the information from the internet. To configure curl through a proxy, you will have to create a file `/root/.curlrc` with a content like this:

```
proxy = http://user:password@proxy.example.com:3128
```

Software packages

They are downloaded currently via `file_get_contents()`, using a proxy is more complex with this option.

Others (tools, etc..)

In the current versions the external tools, such as roundcube or phpmyadmin have been separated into different repositories for easier maintenance. They are downloaded when
