Using reiserfs file system with i-MSCP

In order, to use the reiserfs file system with i-MSCP, you must follow these steps:

Edit your **/etc/fstab** file to add the **attrs** option for your device (eg. device containing the /var partition). For instance:

```
UUID=74699091-3ab8-43f2-bdd5-d1d898ab50fd /            reiserfs notail
0         1
```

Must be updated to:

```
UUID=74699091-3ab8-43f2-bdd5-d1d898ab50fd /            reiserfs notail,attrs
0         1
```

Once you did this, you can remount your device. For instance:

```
# mount -o remount /dev/disk/by-uuid/74699091-3ab8-43f2-bdd5-d1d898ab50fd
```

And then, normally you must be able to use i-MSCP without any trouble (a least with the immutable bit).

If needed, you can find the **uuid** of your device, with the following command:

```
# blkid device
```

where **device** must be replaced by your device path (such as /dev/sda1)
